AMENDMENTS TO THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) An image processing server, comprising:

a communication unit that receives image data from a mobile communication

device, the image data having been sensed by the mobile communication device;

a specifier that specifies a position of the mobile communication device based on

global positioning system (GPS) information relating to a base station representing a

communication region where the image data was sensed by the mobile communication

device; and

an adder that adds first position information indicative of the specified position to

the image data as attribute information of the image data.

2. (Currently Amended) The image processing server of claim 1, further

comprising:

a database that stores global positioning system-(GPS) information for a plurality

of base stations;

wherein the specifier specifies the position of the mobile communication device

based on the base station related information, the base station being used in transmitting

the image data, and the database storing the GPS information in association with the base

station related information.

Docket No. 0649-0955P

Application No.: 10/824, 439

Reply to Office Action of April 11, 2007

3. (Currently Amended) The image processing server of claim 1, wherein the first

position information includes at least one of global positioning system (GPS)

information, address information and a place name.

4. (Previously Amended) The image processing server of claim 2, wherein the

base station related information includes a base station number of the base station.

5. (Currently Amended) An image processing server, comprising:

a communication unit that receives image date data and first global positioning

system (GPS) position information, the image data have been sensed by a mobile

communication device and the first GPS position information relating to a base station

representing a communication region where the image data was sensed by the mobile

communication device; and

an adder that adds second position information, indicative of a position where the

image sensor in the mobile communication device sensed the image data, to the image

data sensed by the image sensor as attribute information of the image data based on the

first position information.

6. (Currently Amended) The image processing server of claim 5, wherein the first

position information includes at least one of global positioning system (GPS)

information, address information and a place name.

Docket No. 0649-0955P

Application No.: 10/824, 439

Reply to Office Action of April 11, 2007

7. (Previously Amended) The image processing server of claim 5, wherein the

second position information includes at least one of a base station number and a place

name, obtained from a base station.

8. (Original) The image processing server of claim 1, wherein the adder adds the

first position information to an exchangeable information file (Exif) tag of the image

data.

9. (Previously Amended) The image processing server of claim 5 wherein the

adder adds the second position information to an exchangeable information file (Exif) tag

of the image data.

10. (Previously Amended) The image processing server of claim 8, further

comprising:

an adder that adds the Exif tag to the image data if the image data received from

the mobile communication device does not include an Exif tag.

11. (Previously Amended) The image processing server of claim 9, further

comprising:

an adder that adds the Exif tag to the image data if the image data received from

the mobile communication device does not include an Exif tag.

12. (Currently Amended) An image processing server, comprising:

means for receiving image data from a mobile communication device, the image data having been sensed by the mobile communication device;

means for specifying a position of the mobile communication device based on global positioning system (GPS) information relating to a base station representing a communication region where the image data was sensed by the mobile communication device; and

means for adding first position information indicative of the specified position to the image data as attribute information of the image data.

13. (Currently Amended) The image processing server of claim 12, further comprising:

a database for storing global positioning system (GPS) information for a plurality of base stations; and

wherein the means for specifying specifies the position of the mobile communication device based on the base station related information, the base station being used in transmitting the image data and the database storing the GPS information in association with the base station related information.

14. (Currently Amended) The image processing server of claim 12, wherein the first position information includes at least one of global positioning system—(GPS) information, address information and a place name.

5

Docket No. 0649-0955P

Application No.: 10/824, 439
Reply to Office Action of April 11, 2007

15. (Previously Amended) The image processing server of claim 12, wherein the

base station related information includes a base station number of the base station.

16. (Currently Amended) An image processing server, comprising:

means for receiving image data and first global positioning system (GPS) position

information, the image data having been sensed by a mobile communication device and

the first GPS position information relating to a base station representing a communication

region where the image data was sensed by the mobile communication device; and

means for adding second position information, indicative of a position where an

image sensor in the mobile communication device sensed the image data, to the image

data sensed by the image sensor as attribute information of the image data based on the

first position information.

17. (Currently Amended) The image processing server of claim 16, wherein the

second position information includes at least one of global positioning system (GPS)

information, address information and a place name.

18. (Previously Amended) The image processing server of claim 16, wherein the

first position information includes at least one of a base station number and a place name,

obtained from a base station.

DRA/JRS/amm

Application No.: 10/824, 439 Docket No. 0649-0955P

Reply to Office Action of April 11, 2007

19. (Original) The image processing server of claim 12, wherein the means for

adding adds the first position information to an exchangeable information file (Exif) tag

of the image data.

20. (Previously Amended) The image processing server of claim 16 wherein the

means for adding adds the second position information to an exchangeable information

file (Exif) tag of the image data.

21. (Previously Presented) A method of providing location information to image

date, the location information indicative of the location where the image data was sensed,

comprising:

receiving a message from a mobile communication device, the message including

image data sensed by the mobile communication device;

specifying a base station used to transmit the received message;

acquiring location information associated with the specified base station; and

7

adding the acquired location information to the received image data as attribute

information.
